East Providence Fire Dept. earns national recognition for efforts to improve STEMI treatment

The American Heart Association presents Mission: Lifeline EMS Gold Plus Achievement Award for implementation of quality care for severe heart attack patients

EAST PROVIDENCE, RI – The City of East Providence Fire Department has received the American Heart Association's [Mission: Lifeline® EMS](#) GOLD achievement award for its commitment to offering rapid, research-based care to people experiencing the most severe form of heart attack, ultimately saving lives.

Each year, more than 250,000 people experience a type of heart attack known as an ST elevation myocardial infarction (STEMI), caused by a blockage of blood flow to the heart that requires timely treatment. To prevent death, it is critical to restore blood flow as quickly as possible by either mechanically opening the blocked vessel or using clot-busting medication.

Mission: Lifeline is the American Heart Association's national initiative to advance the system of care for patients with high-risk, time-sensitive disease states, such as severe heart attacks. The program helps reduce barriers to prompt treatment for heart attacks – starting from when 911 is called, to EMS transport and continuing through hospital treatment and discharge. Optimal care for heart attack patients takes coordination between the individual hospital, EMS and health care system.

“The health care professionals who interact with a patient even before he or she enters the hospital or emergency room play a vital part in the system of care for those who have heart attacks,” said James G. Jollis, M.D., volunteer chair for the GWTG-CAD Systems of Care Advisory Work Group and professor of medicine at Duke University School of Medicine. “Since they are the first medical point of contact, they can save precious minutes of treatment time by activating the emergency response system that alerts hospitals to an incoming heart attack patient.”

The Mission: Lifeline achievement award is earned by agencies that demonstrate a commitment to treating patients according to the most up-to-date research-based practices as outlined by the American Heart Association.

“East Providence Fire Department is honored to be recognized by the American Heart Association for our dedication to providing optimal care for heart attack patients,” Director of Emergency Medical Services Capt. John Potvin said. “The Mission: Lifeline program puts proven knowledge and guidelines to work on a daily basis so patients have the best possible chance of survival.”

About Mission: Lifeline

The American Heart Association’s Mission: Lifeline[®] program helps hospitals and emergency medical services develop systems of care that follow proven standards and procedures for acute coronary syndrome patients. The program works by mobilizing teams across the continuum of care to implement American Heart Association/American College of Cardiology clinical treatment guidelines.
